Intros (10): name, year, skills, previous experience/internships, what they want to learn, what your hoping to get out of this project

Vision (5–10): auto-find viral moments in long videos (Podcasts -> ready to post short form clips) EX. andrew huberman or startalk or joe rogan **let me know if there is any features you have in mind**

7 stages (10):

1. Upload video
2. Extract audio (FFmpeg)
3. Transcribe with timestamps (Whisper API)
4. Chunk + embed transcript
5. Score moments (LangChain + LLM + RAG)
6. Cut clips (FFmpeg), with captions and 9:16 crop as stretch goals
7. Review/export UI

Stack (10): Python, Whisper API, LangChain, OpenAI embeddings + pgvector, FFmpeg, FastAPI, Celery + Redis, React/Next.js, GitHub. Open to feedback

Roles (10): AI/pipeline, backend, frontend. What has everyone done in the past?

How we work (10): GitHub, weekly standup time (online in busier times), realistic hours per week.

Folders: `/frontend`, `/backend`, `/pipeline`, `/docs`

- No direct pushes to `main`
- One branch per task (`feature/...`)
- PRs need 1 approval; keep them small
- Every task is an Issue on a Projects board (To Do / In Progress / Review / Done)
- Never commit API keys: use `.env` and `.env.example`
- Add CI (GitHub Actions) later

issue-driven workflow

First tasks:
- Go over the Github videos I will send to familiarize yourself with how it works
- Go over all all the technologies which we will be using so everyone knows what they are used for
